Overview

- **Tableau Server Features and Specs**
- **Architecture Overview**
- **Server Processes**
- **Installing & Configuring (demo)**
- **Authoring & Deploying (demo)**

Tableau Server Features

Business Features

Interactive dashboards any browser

Data Server provides
“single-source of truth”

Data Engine = blazing fast queries

Works great on mobile

Web Authoring ad-hoc analysis

Self-service publishing

No IT bottleneck

IT Features

Active Directory Integration

Multi-tenancy using “sites”

Email alerts on system restarts

Admin monitoring views

Security override option

Easy backup/restore

Deploys in minutes (literally)

Tableau Server Tech Specs

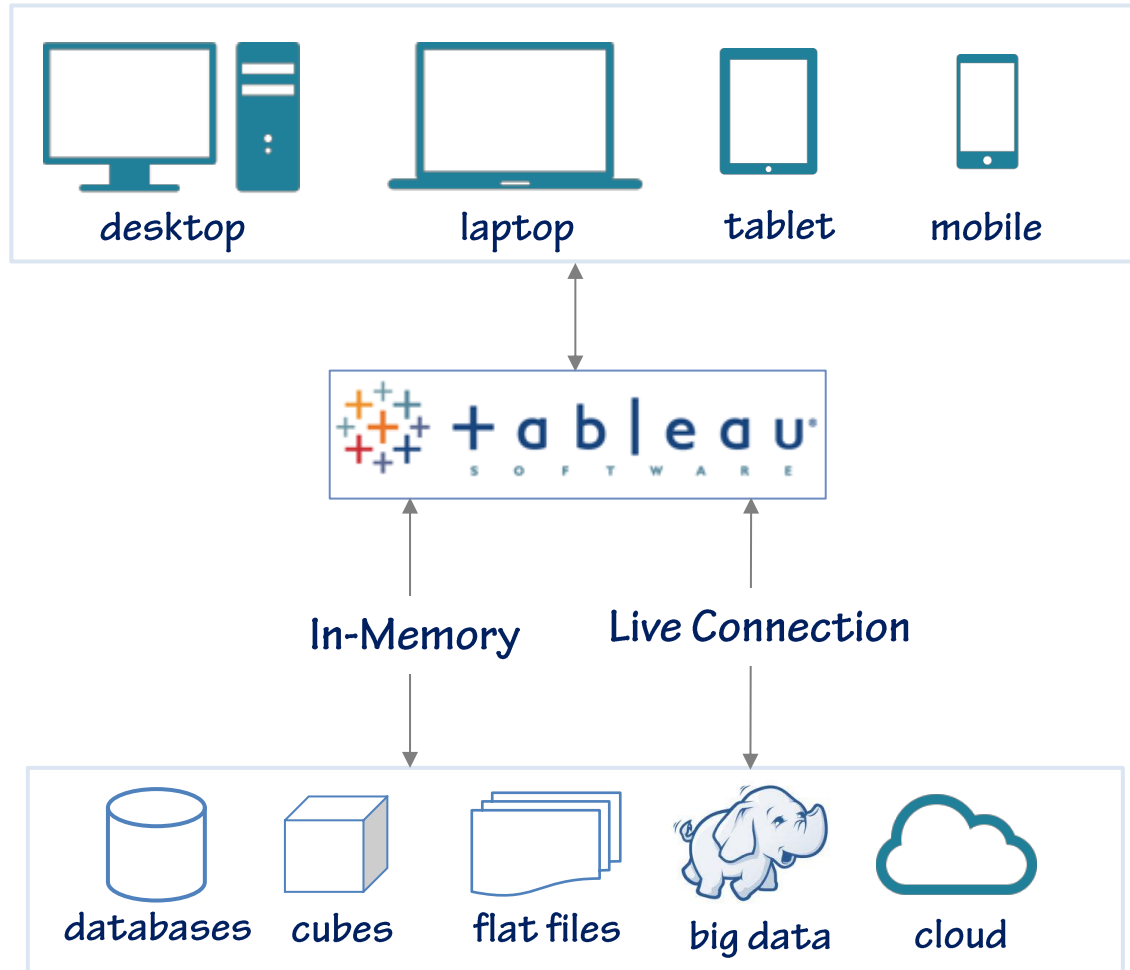

System Requirements

- ❑ Windows Server 2012, 2008, 2008 R2, 2003 SP1 or higher; Windows® 8 or 7 on x86 or x64 chipsets
- ❑ 32-bit or 64-bit versions of Windows
- ❑ Minimum of a Pentium 4 or AMD Opteron processor
- ❑ 32-bit color depth recommended
- ❑ Internet Protocol version 4 (IPv4)

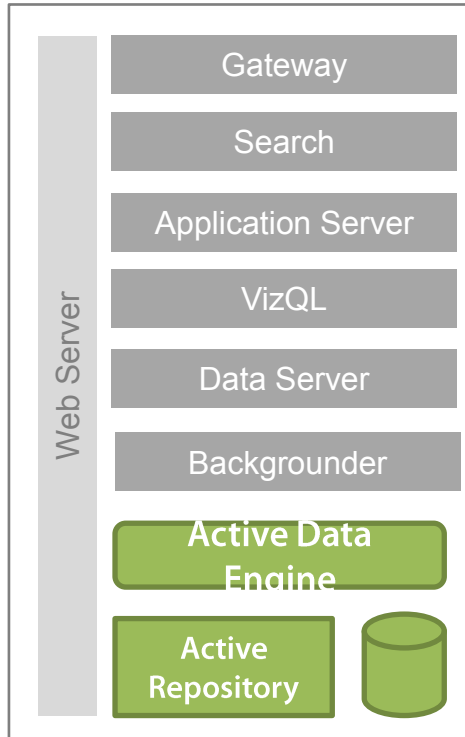

Hardware Guidelines

- ❑ **Very small deployments** (1-2 concurrent users)
 - ❑ 2x CPU, 4GB RAM, 20GB HDD
- ❑ **Small deployments** (i.e. less than 25 concurrent users)
 - ❑ 4x CPU, 8GB RAM, 40GB HDD
- ❑ **Medium deployments** (i.e. less than 100 concurrent users)
 - ❑ 8x CPU, 32GB RAM, 100GB HDD
- ❑ **Enterprise deployments** (ie. more than 100 concurrent users)
 - ❑ Contact Tableau for guidance.

Tableau Server Architecture

Server Processes

Gateway (32bit) = Load Balancer

Search (32bit) = Indexes repository

App Server (32bit) = Web UI, Security, Navigation

VizQL (32bit) = Main application engine, does everything related to views and dashboards

Data Server (32bit) = Loads cache w/ data requests, manages semantic layer (metadata layer)

Backgrounder (32bit) = Handles background refreshes and tasks (eg. Extract Refreshes and AD Sync jobs)

Data Engine (64bit) = Proprietary DB engine for Tableau Server Extracts

Repository (32bit) = Metadata for all Tableau Server Objects

Installing & Configuring (demo)

Customizing

Overview

- Understanding High Availability
- Configuring High Availability (walkthrough)
- Customization Options
- Additional Customizations (not supported)
- Customizing (demo)
- Backup Automation (demo)

Understanding High Availability

Single Node System

Primary Tableau Server

3-Node System (HA)

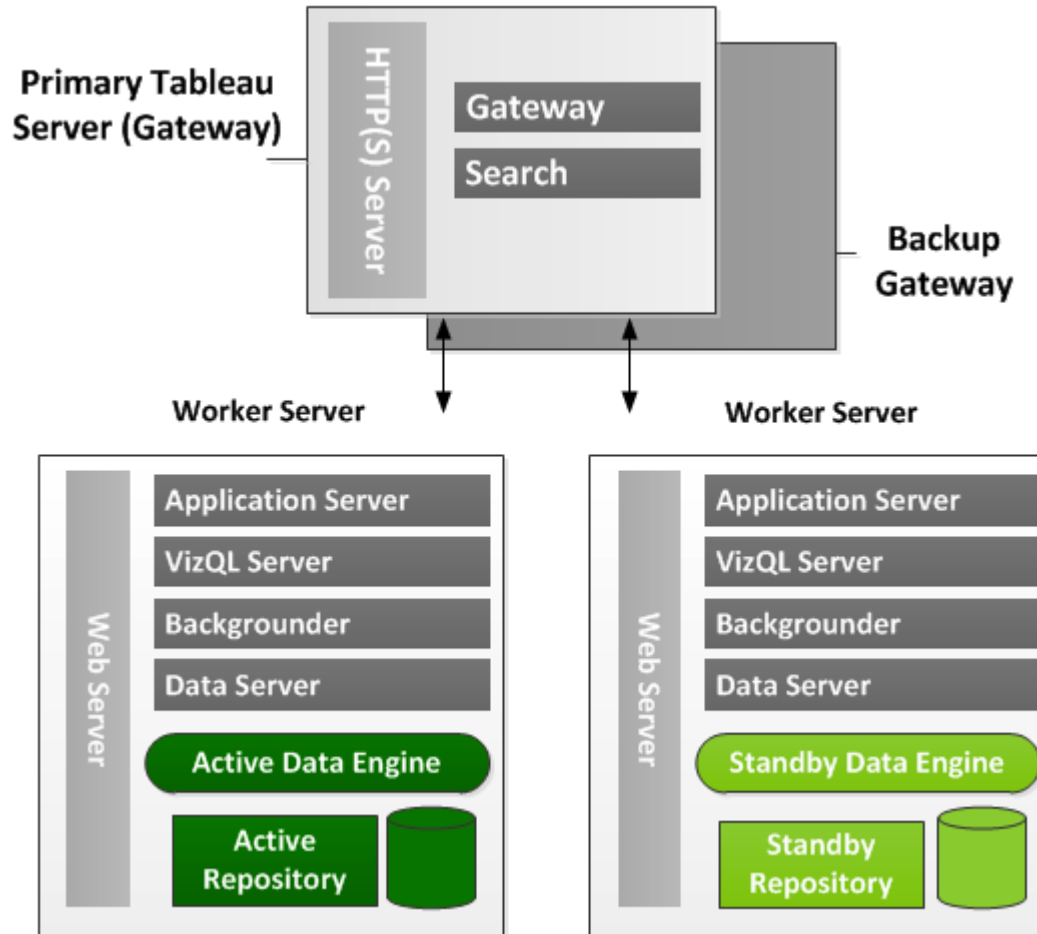

Primary Tableau Server (Gateway)

Worker Server

What If The Gateway Goes Down?

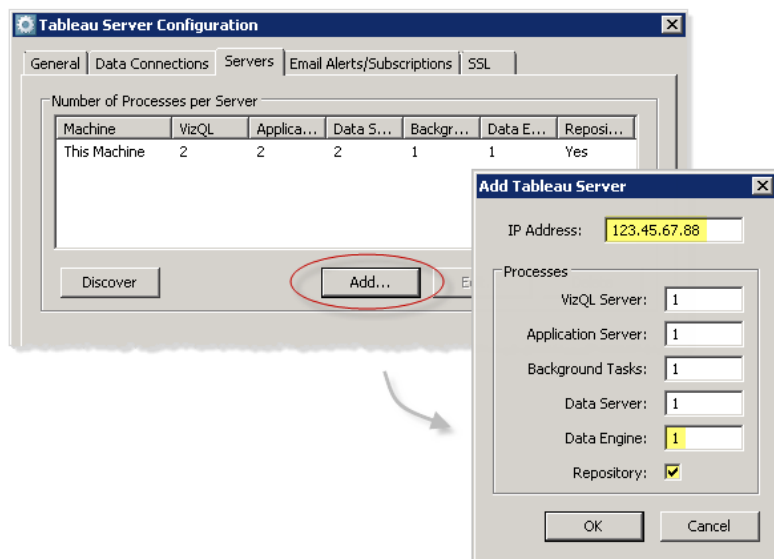

Configuring High Availability (walkthrough)

1 - Install Tableau Server on Gateway

Maintenance							
Status							
Waiting for request Standing by Handling request Unlicensed Down							
Machine	VizQL Server	Application Server	Background Tasks	Data Server	Data Engine	Repository	Web Server
123.45.67.89	✓	✓	✓	✓	✓	✓	✓

2 - Install worker software and add worker 1

3 - Add Worker 1 to Gateway

Maintenance							
Status							
Waiting for request Standing by Handling request Unlicensed Down							
Machine	VizQL Server	Application Server	Background Tasks	Data Server	Data Engine	Repository	Web Server
123.45.67.89	✓	✓	✓	✓	✓	✓	✓
123.45.67.88	✓	✓	✓	✓	✓	✓	✓

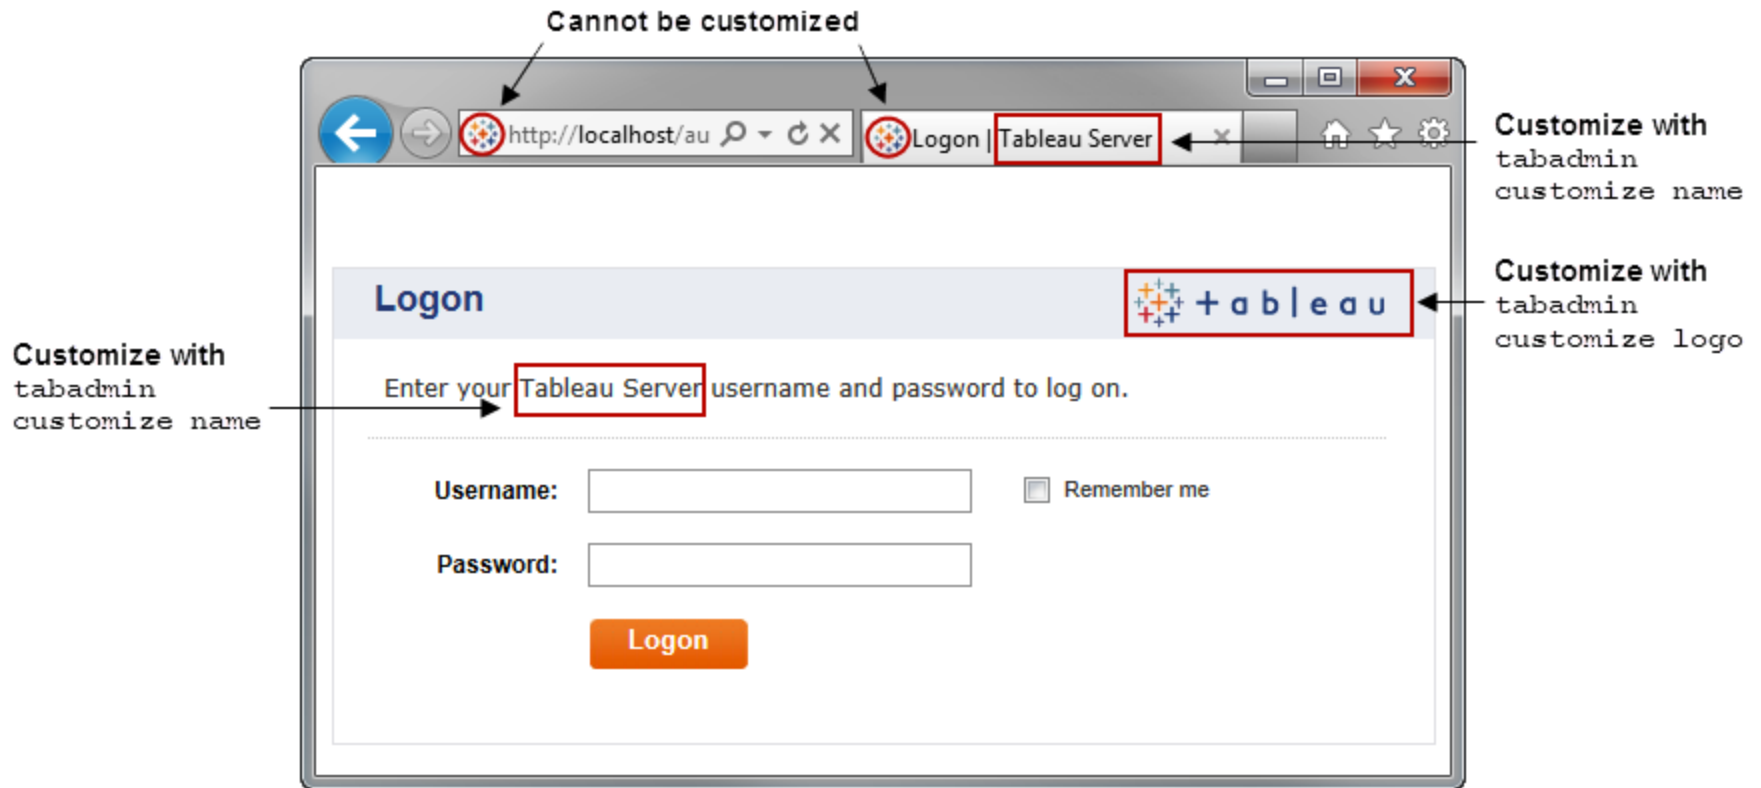

4 - Remove processes from Gateway

5 - Add worker 2 to Gateway

Maintenance							
Status							
Waiting for request Standing by Handling request Unlicensed Down							
Machine	VizQL Server	Application Server	Background Tasks	Data Server	Data Engine	Repository	Web Server
123.45.67.89							✓
123.45.67.88	✓	✓	✓	✓	✓	✓	✓
123.45.67.87	✓	✓	✓	✓	✓	✓	✓
